"From the bus stop across the street, it was hard to tell, but suddenly I understood, seeing the passengers in the van that picked her up every morning, that she was slightly retarded."

A precocious teenager in a French suburb finds himself powerfully, troublingly drawn to the girl he sees every day on the way to school. As he watches and thinks about her, his daydreams—full of lyrics from Joy Division and the Smiths, fairy tales, Flowers for Algernon, sexual desire and fear, loneliness, rage for escape, impatience to grow up—reveal an entire adolescence. And this fleeting erotic obsession, remembered years later, blossoms into a meditation on what it means to be a smart kid, what it means to be dumb, and what it means to be in love with another person. **03** is a book about young love like none you have

ever read. It marks the English-language debut of a unique French writer—one of the great stylists of his generation.

In this book, a novel optimization

method inspired by a paradigm from nature is introduced. The chemical reactions are used as a paradigm to propose an optimization method that simulates these natural processes. The proposed algorithm is described in detail and then a set of typical complex benchmark functions is used to evaluate the performance of the algorithm. Simulation results show that the proposed optimization algorithm can outperform other methods in a set of benchmark functions. This chemical reaction optimization paradigm is also applied to solve the tracking problem for the dynamic model of a unicycle mobile robot by integrating a kinematic and a torque controller based on fuzzy logic theory. Computer simulations are presented confirming that this optimization paradigm is able to outperform other optimization techniques applied to this particular robot application.
