Mission to the World CRC Press

The development of stabilization and solidification techniques in the field of waste treatment reflects the efforts to better protect human health and the environment with modern advances in materials and technology. Stabilization and Solidification of Hazardous, Radioactive, and Mixed Wastes provides comprehensive information including case studies, selection criteria, and regulatory considerations on waste characterization, contaminant transport and leachability, testing methods for stabilized waste forms, and the interactions between contaminants and stabilizing components. The book describes various systems based on cement technology that are used for stabilization and solidification of wastes. It demonstrates how to design a stabilized waste form, including the use of statistical techniques for generating response surface models for large, complicated applications. It provides guidelines for the selection of bonding materials, such as hydraulic cements, polymers, and hydroceramics, and discusses several additives and sorbents used to enhance immobilization, binder properties, and contaminant stabilization. The book portrays the transport mechanisms of contaminants in treated wastes and how to predict the transport of contaminants with various mathematical models. Following a discussion of waste types, principles, and properties of cemented waste forms, such as microstructure and durability, it outlines the test methods used to evaluate them. Fusing research, technology, and general practice principles taken from the firsthand experience of scientists, engineers, regulators, and teachers, Stabilization and Solidification of Hazardous, Radioactive, and Mixed Wastes can be used in advanced environmental engineering courses and as a reference for stabilization and solidification engineers, technology vendors and buyers, laboratory technicians, scientists, environmentalists, policymakers, and managers in treatment storage and disposal facilities.

How to Become a Radio Amateur Hassell Street Press

This timely collection brings together original explorations of the COVID-19 pandemic and its wide-ranging, global effects on human rights. The contributors argue that a human rights perspective is necessary to understand the pervasive consequences of the crisis, while focusing attention on those being left behind and providing a necessary framework for the effort to "build back better." Expert contributors to this volume address interconnections between the COVID-19 crisis and human rights to equality and non-discrimination, including historical responses to pandemics, populism and authoritarianism, and the rights to health, information, water access, and the environment. Highlighting the dangerous potential for derogations from human rights, authors further scrutinise the human rights compliance of new legislation and policies in relation to issues such as privacy, protection of persons with disabilities, freedom of expression and access to medicines. Acknowledging the pandemic as a defining moment for human rights, the volume proposes a post-crisis human rights agenda to engage civil society and government at all levels in concrete measures to roll back increasing inequality. With rich examples, new thinking, and provocative analyses of human rights, COVID-19, pandemics, crises, and inequality, this book will be of key interest to scholars, students and practitioners in all areas of human rights, global governance, public health, as well as others who are ready to embark on an exploration of these complex challenges.
